Requirements

⇒ High requirements on:

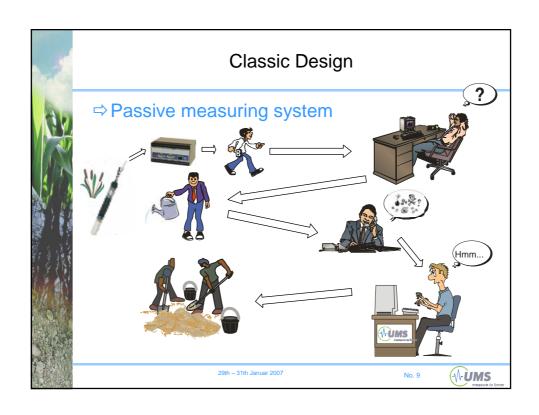

- Easy Handling
- High Reliability
- High Accuracy
- Easy maintenance
- Flexibility of the system

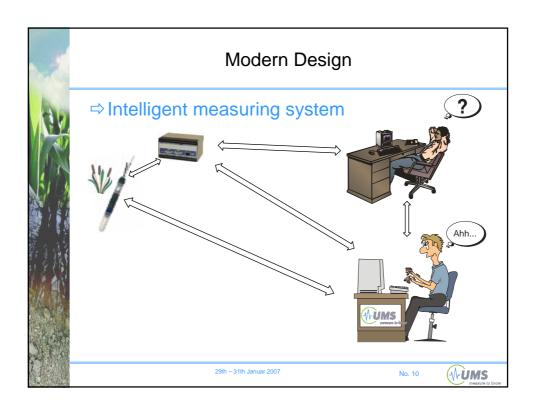

⇒ The solution: "intelligent" sensors and measuring systems

Modern Design

⇒ "Intelligent" measuring systems:

- Sensors and actuators are driven by a µController or programable datalogger
- Software can be reconfigured/changed by the user
- Redirect as many as possible functions to software!

Modern Sensors

⇒ Intelligent Sensors:

- Measure values are internally:
 - Linearized
 - Filtered
 - · Compensated and fitted
 - · Converted to physical Units
- User or datalogger communicates <u>with the μC</u> over serial bus, or analogue outputs
